

Partnership opportunities

Fields marked with * are mandatory.

Are you looking for partner to fulfill the requirements of current or forthcoming [F4E business opportunity](#)?

Do you have relevant expertise, technologies, or interesting raw materials to offer?

Or do you simply want to introduce your company and engage in the EU Fusion Industry Supply Chain?

Whether you are a large corporation, an SME, an established fusion player or a newcomer to the field, this is your starting point.

In just a few minutes, you can submit an offer or request below. Our Market Analysis team will review your submission and feature it in the [Fusion Partnerships section](#) of the F4E Industry Portal.

Thank you for joining us and contributing to the future of fusion!

F4E Market Analysis and Techno Transfer Group

*** Description (Please describe what you are offering / looking for. If related to a specific Call for Tender or Business Opportunity with F4E or ITER IO please indicate the name and reference)**

NUCLEONOVA specializes in Procurement Engineering and supply chain solutions for the nuclear industry. We provide comprehensive support in market research and equivalency analysis, purchasing management, technical specifications, and requirements interpretation. Our expertise extends to Equipment Qualification (seismic, environmental, nuclear, EMC and certifications) as well as counterfeit detection to ensure compliance and reliability across the supply chain. When critical components are unavailable, we deliver effective obsolescence management solutions, including reverse engineering and manufacturing aligned with EPRI guidelines and other international standards. In addition, Nucleonova offers dedicated support for nuclear certifications such as ISO 19443, guiding organizations throughout the entire process of implementation, auditing, and continuous improvement to strengthen nuclear safety culture and supply chain quality. With more than 50 years of combined industry experience, our consulting team helps clients navigate complex nuclear requirements, ensuring that every project is managed with the highest standards of safety, quality, and technical rigor.
