

Partnership opportunities

Fields marked with * are mandatory.

Are you looking for partner to fulfill the requirements of current or forthcoming [F4E business opportunity](#)?

Do you have relevant expertise, technologies, or interesting raw materials to offer?

Or do you simply want to introduce your company and engage in the EU Fusion Industry Supply Chain?

Whether you are a large corporation, an SME, an established fusion player or a newcomer to the field, this is your starting point.

In just a few minutes, you can submit an offer or request below. Our Market Analysis team will review your submission and feature it in the [Fusion Partnerships section](#) of the F4E Industry Portal.

Thank you for joining us and contributing to the future of fusion!

F4E Market Analysis and Techno Transfer Group

*** Description (Please describe what you are offering / looking for. If related to a specific Call for Tender or Business Opportunity with F4E or ITER IO please indicate the name and reference)**

EMC Barcelona is a technology-based Spanish SME specialised in high value-added Electromagnetic Compatibility (EMC) projects, from early product design through to final validation. We are located at Parc UPC (K2M building), Barcelona, Spain.

WHAT WE OFFER:

- EMC standard testing and agile EMC pre-compliance checking of equipment, subsystems and components.
- In-situ EMC assessments and on-site electromagnetic environment characterisation in industrial and large-scale facilities, where equipment cannot be moved to a laboratory.
- EMC engineering and expert support: design review, EMC control plans, filtering, shielding, grounding and bonding, cable routing, EMI troubleshooting and root-cause analysis.
- emiGO, our own EMI measurement solution for continuous and on-site electromagnetic interference monitoring.
- Tailored EMC training and workshops for engineering teams (including EMC in space systems).

BACKGROUND: R&D on EMI measurement instrumentation and on EMC assessment methods for complex systems, including fixed installations; participation in large EU funded projects like La RAMBLA-EMC project (Eureka Xecs cluster, CDTI-funded); collaborations with universities, mainly, UPC (Universitat Politècnica de Catalunya), and other entrepreneurial networks ESA BIC, APTE and PAE.

WHAT WE ARE LOOKING FOR: We would like to act as a subcontractor and technical partner to primes, integrators, manufacturers and laboratories in the fusion supply chain whenever EMC compliance, electromagnetic environment characterisation or EMI mitigation is required, and to introduce our capabilities to potential partners in the EU fusion industry.
