Partnership opportunities

Fields marked with * are mandatory.

Are you looking for partner to fulfill the requirements of current or forthcoming F4E business opportunity?
Do you have relevant expertise, technologies, or interesting raw materials to offer?
Or do you simply want to introduce your company and engage in the EU Fusion Industry Supply Chain?

Whether you are a large corporation, an SME, an established fusion player or a newcomer to the field, this is your starting point.

In just a few minutes, you can submit an offer or request below. Our Market Analysis team will review your submission and feature it in the Fusion Partnerships section of the F4E Industry Portal.

Thank you for joining us and contributing to the future of fusion!

F4E Market Analysis and Techno Transfer Group

*** Description (Please describe what you are offering / looking for. If related to a specific Call for Tender or Business Opportunity with F4E or ITER IO please indicate the name and reference)**

Inspirators! is an Estonian data and AI company helping organisations turn complex engineering documentation into structured, traceable data, build integrated data platforms and automate time-consuming workflows.

Our FutuDraw technology extracts and interprets information from engineering documents, technical specifications, schematics, 2D drawings, 3D models, PDFs and spreadsheets. It supports requirements analysis, bill of materials (BOM) creation and matching, and preliminary cost estimation. Engineers can validate results and trace findings back to the source. Solutions can be deployed on-premises or in the cloud, using customer-approved AI models.

We also design and develop data platforms, data integration pipelines, analytical solutions and online dashboards that bring together information from multiple sources. Our services include data analysis, operational reporting and integration with third-party systems, including ERP, manufacturing and other enterprise applications. As a Databricks Consulting & Integration Partner, we help organisations make their data accessible and useful for engineering, operations and management decisions.

Our expertise includes ontology-driven data extraction, digital twins, data interoperability and enterprise system integration. We contribute to ESA's Digital Twin Spacecraft project as a subcontractor to Airbus and are a member of the Cooperants consortium.

Our experience spans space, manufacturing, shipbuilding, energy and financial services. Our customers include Airbus, Elenger (Eesti Gaas), Adven, Glamox, Saint-Gobain, SEB Group, Stera Technologies, Plaat Detail, IAP GmbH and others.

We are looking for opportunities to support F4E, ITER and their suppliers with engineering data management, integrated data platforms, analytics, dashboards, document processing and workflow automation. We welcome pilot projects, technical partnerships and consortium opportunities where our expertise can help reduce manual work, improve data quality and traceability, and support informed decisions.

*** What form of collaboration would you like to promote?**

- (●) Offer - my organisation has relevant expertise, technologies, or raw materials to offer
- ( ) Request - we are looking for specific expertise, technologies, or raw materials
- ( ) Both of the above

*** Please indicate below the collaboration preferences you wish to highlight (you can select more than one)**

- [x] Specific expertise and technologies
- [ ] Specific materials
- [x] To sub-contract to partners
- [x] To co-contract with partners
- [x] Sharing general technologies and business presentations
- [ ] Other

Upload supporting documentation (e.g., business presentation, relevant technical specifications)
